

**QUEUEING THEORY:  
A Linear Algebraic Approach (LAQT)  
Second Edition**

Lester Lipsky  
Department of Computer Science and Engineering  
Universtiy of Connecticut, Storrs, CT 06269-2155

**TABLE OF CONTENTS**

**Preface to Second Edition**

**Preface to First Edition**

**CHAPTER I: INTRODUCTION**

- 1.1 Background
  - 1.1.1 Basic Formulas
  - 1.1.2 Markov Property
  - 1.1.3 Notation, Pronouns, Examples
- 1.2 Distribution Functions Over Time
  - 1.2.1 Exponential Distribution (Continuous Time,  $t$ )
  - 1.2.2 Geometric Distribution (Discrete Time,  $n$ )
- 1.3 Chapman-Kolmogorov Equations
  - 1.3.1 Continuous Time
  - 1.3.2 Discrete Time
  - 1.3.3 Time-Dependent and Steady-State Solutions
    - 1.3.3.1 Some Properties of Matrices
    - 1.3.3.2 How a System Approaches Its Steady State

**CHAPTER II: M/M/1 QUEUE**

- 2.1 Steady-State M/M/1-Type Loops
  - 2.1.1 Time-Dependent Solution for  $N = 2$
  - 2.1.2 Steady-State Solution for Any  $N$
  - 2.1.3 Open M/M/1 Queue ( $N \rightarrow \infty$ )
  - 2.1.4 Buffer Overflow, and Customer Loss for the M/M/1/N Queue
  - 2.1.5 Load-Dependent Servers
  - 2.1.6 Departure Process
- 2.2 Relaxation Time for M/M/1/ /N Loops
- 2.3 Other Transient Parameters
  - 2.3.1 Mean First-Passage Times for Queue Growth
  - 2.3.2  $k$ -Busy Period
    - 2.3.2.1 Mean Time of a Busy Period
    - 2.3.2.2 Probability That a Queue Will Reach Length  $k$
    - 2.3.2.3 Maximum Queue Length During a Busy Period

**CHAPTER III: M. E. FUNCTIONS**

- 3.1 Properties of a Subsystem,  $S$ 
  - 3.1.1 Mean Time to Leave  $S$
  - 3.1.2 Service Time Distribution of  $S$
  - 3.1.3 Properties of  $\mathbf{B}$  and  $\mathbf{V}$
  - 3.1.4 Numerical Algorithm for Evaluating  $b(x)$  and  $R(x)$
- 3.2 Matrix Exponential Distributions

- 3.2.1 Commonly Used Distributions
  - 3.2.1.1 Erlangian Distributions
  - 3.2.1.2 Hyperexponential Distributions
- 3.2.2 Sums of Erlangian Functions
- 3.2.3 Other Examples of ME Functions
  - 3.2.3.1 A 4-State Hyper-Erlangian
  - 3.2.3.2 A Non PHase Distribution
- 3.3 Distributions With Heavy Tails
  - 3.3.1 Subexponential Distributions
  - 3.3.2 Power-Tailed (PT) distributions
  - 3.3.3 What do PT Distributions Look Like?
  - 3.3.4 Statistical Behavior Of Large Samples
  - 3.3.5 The Central Limit Theorem and Stable Distributions
    - 3.3.5.1 Distributions with Finite Variance
    - 3.3.5.2 Distributions with Infinite Variance
    - 3.3.5.3 Stable Distributions and Measured Averages
  - 3.3.6 Truncated Power-tailed (TPT) Distributions
    - 3.3.6.1 Truncation and Range of a Distribution
    - 3.3.6.2 An ME Representation of a TPT Distribution
    - 3.3.6.3 A TPT Distribution Where  $f(0) = 0$
- 3.4 Equivalent Representations
  - 3.4.1 The Canonical Minimal Representation
  - 3.4.2 Isometric Transformations
    - 3.4.2.1 Summary
    - 3.4.2.2 Hierachy of ME Functions
  - 3.4.3 Examples of Equivalent Representations
  - 3.4.4 On the Completeness of ME Distributions
  - 3.4.5 Setting Up Matrix Representations
- 3.5 Renewal Processes and Residual Times
  - 3.5.1 Matrix Representations for the pdf of  $Y_n$
  - 3.5.2 Renewal Function and Transient Renewal Processes
  - 3.5.3 Residual Times and Delayed Intervals
    - 3.5.3.1 Residual Vector
    - 3.5.3.2 Renewal Processes
  - 3.5.4 Two Illustrations of Renewal Processes
    - 3.5.4.1 The Poisson Process
    - 3.5.4.2 Renewal Process with  $E_2$  Interdeparture Times

## CHAPTER IV M/G/1 QUEUE

- 4.1 S.S. M/ME/1//N (and M/ME/1/N) Loop
  - 4.1.1 Balance Equations
  - 4.1.2 Steady-State Solution
  - 4.1.3 Departure and Arrival Queue-Length Probabilities
- 4.2 Open M/ME/1 Queue
  - 4.2.1 Steady-State M/ME/1 Queue
  - 4.2.2 System Times: Pollaczek-Khinchin Formulas
    - 4.2.2.1 Mean Queue Length
    - 4.2.2.2 Queue-Length Probabilities of M/PT/1 Queues
    - 4.2.2.3 Throughput
    - 4.2.2.4 Z-Transform
  - 4.2.3 System Time Distribution
  - 4.2.4 Buffer Overflow and Customer Loss
  - 4.2.5 Distribution of Interdeparture Times
- 4.3 M/G/1 Queue Dependence On  $n$

- 4.3.1 Residual Time as Seen by a Random Observer
- 4.3.2 Weighted Averages of Matrix Operators
- 4.3.3 Waiting Time as Seen by an Arriving Customer
- 4.3.4 System Time of an Arriving Customer
- 4.4 Relation To Standard Solution
  - 4.4.1 Exponential Moments,  $\alpha_k(s)$ , and their Meaning
  - 4.4.2 Connection to Laguerre Polynomials
  - 4.4.3 Connection to Standard Solution
  - 4.4.4 M/M/X//N Approximations to M/ME/1//N Loops
- 4.5 Transient Behavior of M/ME/1 Queues
  - 4.5.1 First-Passage Processes for Queue Growth
    - 4.5.1.1 Conditional Probabilities for Queue Growth
    - 4.5.1.2 Mean First-Passage Time for Queue Growth
  - 4.5.2 Formal Procedure for Finding System Parameters
  - 4.5.3 Properties of the  $k$ -Busy Period
    - 4.5.3.1 Conditional Probabilities for Queue Decrease
    - 4.5.3.2 Mean First-Passage Times for Queue to Drop
    - 4.5.3.3 Probability That Queue Will Reach Length  $n$
    - 4.5.3.4 Maximum Queue Length of a Busy Period
  - 4.5.4 Mean Time to Failure with Backup and Repair

## CHAPTER V: G/M/1 QUEUE

- 5.1 Steady-State Open ME/M/1 Queue
  - 5.1.1 Steady-State Probabilities of the G/M/1 Queue
  - 5.1.2 Arrival and Departure Probabilities
  - 5.1.3 Properties of Geometric Parameter  $s$
  - 5.1.4 Systems where Inter-arrival Times are Power-Tailed
  - 5.1.5 Buffer Overflow Probabilities For the G/M/1 Queue
- 5.2 ME Representations of Departures
  - 5.2.1 Arrival Time Distribution Conditioned by a Departure
  - 5.2.2 Distribution of Interdeparture Times
- 5.3 ME/M/1/N and ME/M/1//N Queues
  - 5.3.1 Steady-State Solution of the ME/M/1/N Queue
  - 5.3.2 Arrival Probabilities and Customer Loss
- 5.4 Steady-State ME/M/C-Type Queues
  - 5.4.1 Steady-State ME/M/X//N Loops
  - 5.4.2 Steady-State ME/M/C Queue
  - 5.4.3 Arrival and Departure Points
- 5.5 Transient Behavior of G/M/1 Queues
  - 5.5.1 First-Passage Times for Queue Growth
  - 5.5.2 The  $k$ -Busy Period

## CHAPTER VI: M/G/C-TYPE SYSTEMS

- 6.1 Introduction
- 6.2 Steady-State M/ME/2//N Loop
  - 6.2.1 Definitions
  - 6.2.2 Balance Equations
  - 6.2.3 Solution of Probability Vectors
- 6.3 Steady-State M/G/C//N-Type Systems
  - 6.3.1 Steady-State M/ME/C//N Loop
  - 6.3.2 Alternate Representation of M/ME/C//N Systems
  - 6.3.3 Generalized M/ME/C//N System
  - 6.3.4 Relation to Jackson Networks
  - 6.3.5 Time-Sharing Systems with Population Constraints

- 6.4 Open Generalized M/G/C Queue
- 6.5 Transient Generalized M/ME/C-Type Queue
  - 6.5.1 Queue Reduction at  $S_1$  with No New Arrivals
  - 6.5.2 Markov Renewal (Semi-Markov Departure) Processes
  - 6.5.3 A Little Bit of Up and Down, with Arrivals
    - 6.5.3.1 First-Passage Processes for Queue Growth
    - 6.5.3.2 First Passages for Queue Decrease
    - 6.5.3.3 MTTF with Backup and Repair
- 6.6 Conclusions

## CHAPTER VII: G/G/1//N LOOP

- 7.1 Basis-Free Expression for  $\Pr[X_1 < X_2]$
- 7.2 Direct Products of Vector Spaces
  - 7.2.1 Kronecker Products
  - 7.2.2  $\Psi$  Projections onto Subspaces
- 7.3 Steady-State ME/ME/1//N Loop
  - 7.3.1 Balance Equations
  - 7.3.2 Steady-State Solution
  - 7.3.3 Outline of an Efficient Algorithm
  - 7.3.4 An Example
- 7.4 A Modicum of Transient Behavior

## CHAPTER VIII: SEMI-MARKOV PROCESSES

- 8.1 Introduction
  - 8.1.1 Matrix Representations of Sub-systems
- 8.2 Markov Renewal Processes
  - 8.2.1 Interdeparture Time Distributions
  - 8.2.2 Correlation of Departures
  - 8.2.3 Laplace Transforms
- 8.3 Some Examples
  - 8.3.1 Departures From Overloaded Servers: Renewal Process
  - 8.3.2 Markov Modulated (or Regulated) Processes
    - 8.3.2.1 The Underlying Generator,  $Q$
    - 8.3.2.2 Markov Regulated Departure Process (MRDP)
    - 8.3.2.3 Markov Modulated Poisson Process (MMPP)
    - 8.3.2.4 Augmented MMPP's (AMMPP)
    - 8.3.2.5 ON-OFF Models (Bursty Traffic)
  - 8.3.3 Merging Renewal Processes
  - 8.3.4 Departures from Overloaded Multiprocessor Systems
  - 8.3.5 Departures From ME/ME/1 Queues
    - 8.3.5.1 If  $S_2$  Is Exponential (M/ME/1 Queues)
    - 8.3.5.2 If  $S_1$  Is Exponential (ME/M/1 Queues)
    - 8.3.5.3 Both  $S_1$  and  $S_2$  Are Nonexponential
    - 8.3.5.4 M/M/1//N Queues
- 8.4 MRP/M/1 Queues
  - 8.4.1 Balance Equations
  - 8.4.2 Some Performance Measures
  - 8.4.3 The G/M/1 Queue As An Example

## CHAPTER IX: L A Q T

- 9.1 Isometric Transformations
- 9.2 Linear Algebraic Formulation
  - 9.2.1 Description of a Single Server
  - 9.2.2 Residual Vector and Related Properties
- 9.3 Networks of Nonexponential Servers

- 9.3.1 Description of System
- 9.3.2 Service Time Distribution
- 9.4 Systems with Two Servers
  - 9.4.1 G/M/1 Queue
  - 9.4.2 Two Nonexponential Servers
  - 9.4.3 Review of Transient Behavior
- 9.5 Concluding Remarks
